

Paired measurements from the same subjects

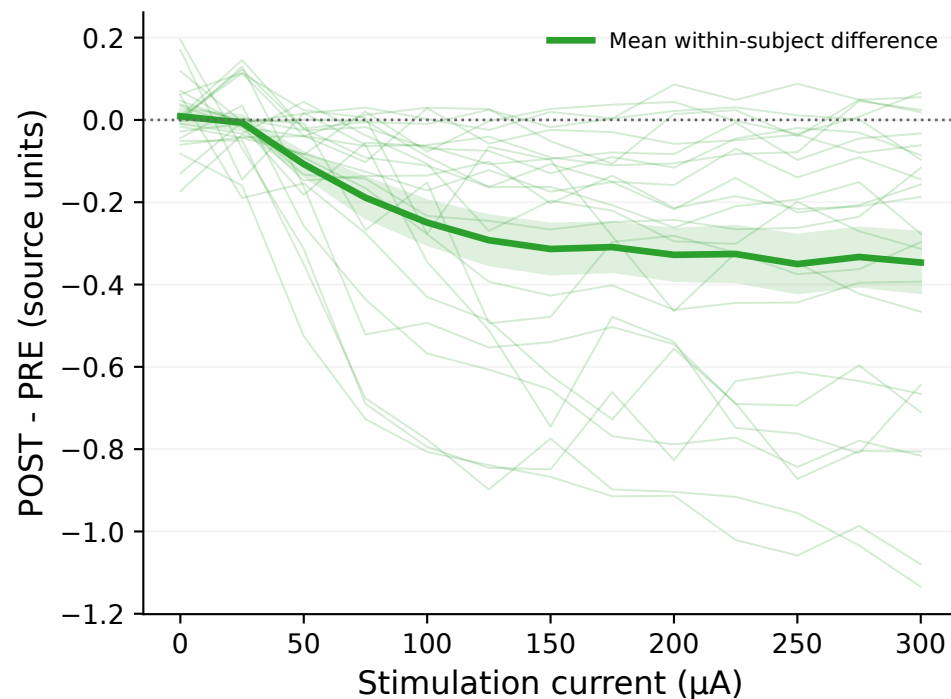

Source: ltp_paired.csv | PRE: n=24 | POST: n=24

TEST / EXECUTION CHECK: small requested permutation count

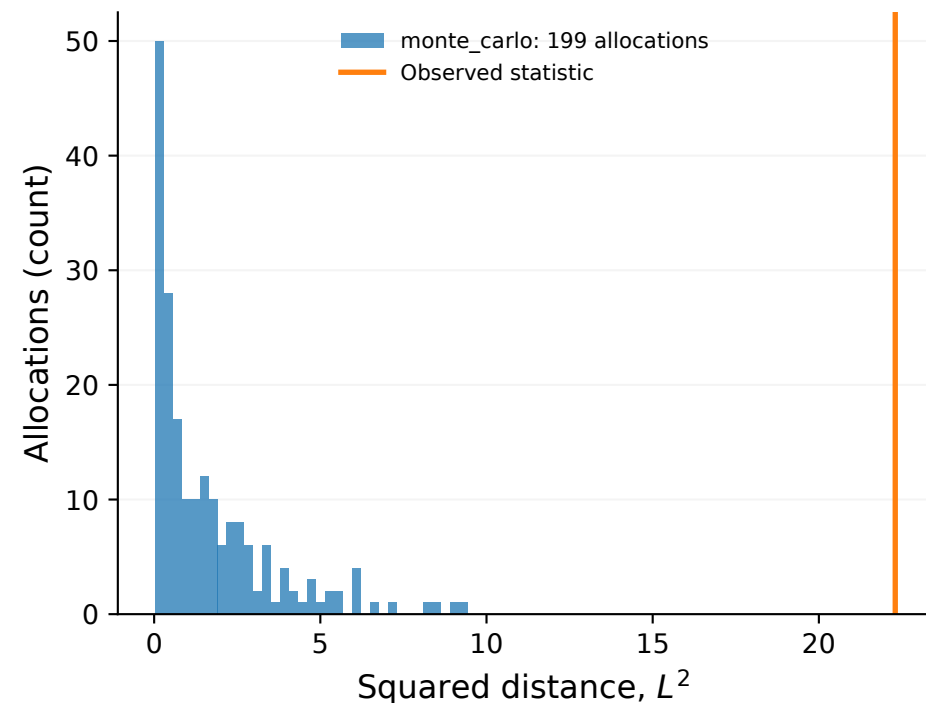

A Group means and SEM

B Matched subject differences

C Randomization distribution

Paired permutation $p = 0.005$. Labels swap only within the same subject; stimulus points remain together.
Small-count test runs check implementation; statistical conclusions require a suitable design and adequate precision.
