

Curve-wise randomization of experimental data

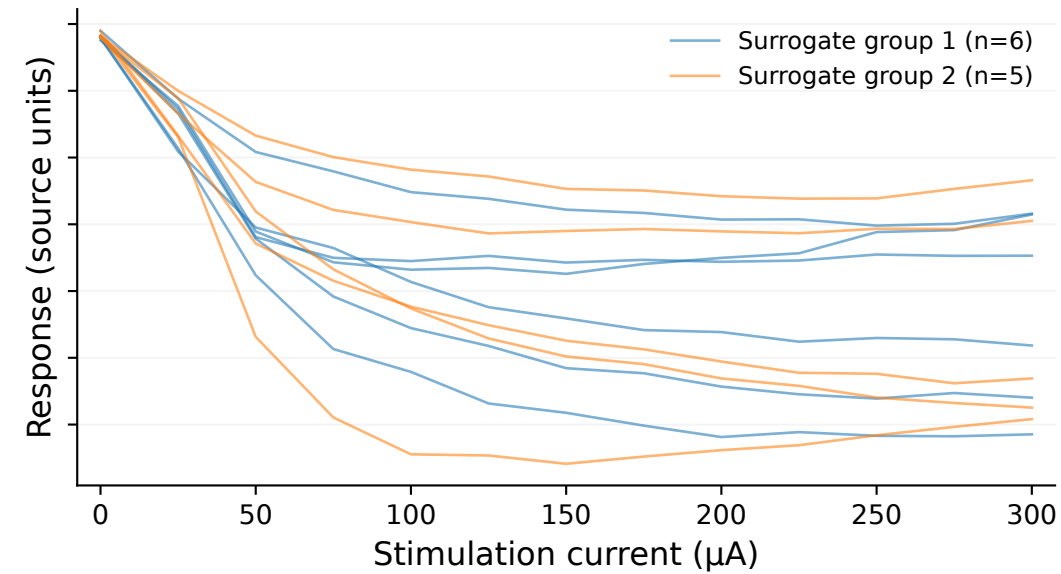

Source: stress_response_ca1.csv | ANH: n = 6 | RES: n = 5

Complete subject-level curves are reassigned; group sizes are preserved

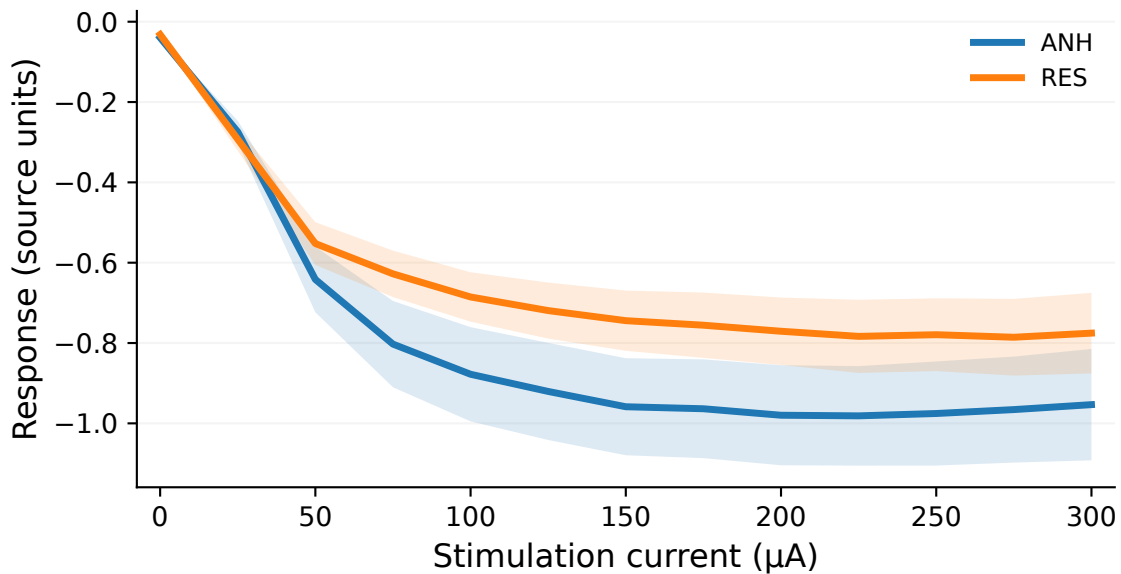

A Original subject curves

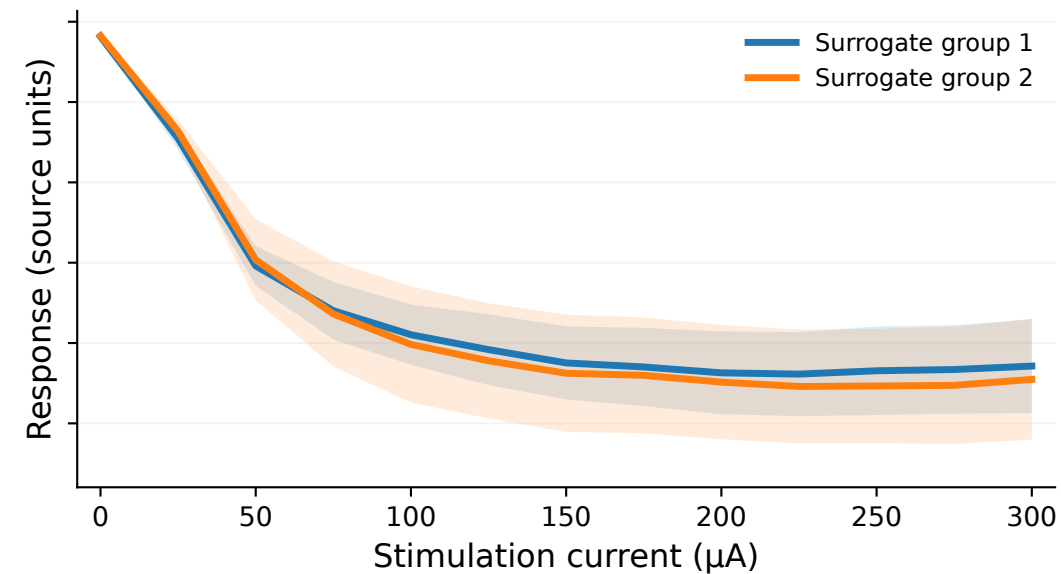

B One random reassignment

C Original means and SEM

D Reassigned means and SEM

Repeated recordings are averaged within subject and condition. Shading: mean $\pm$ SEM.
The surrogate groups are an illustration, not a separately tested comparison.
